

Conditional Order - Example

Up Trigger

- Buy/Sell
- Trigger price must be **larger than market price**, the limit price may be higher or lower than trigger price

Eg: Market price is now 17075 , and you foresee the market would rise and so you want to buy a long position when index breaks 17080

- Input 17080 for trigger price , when market reaches 17080, order will be sent to market
- Limit price is set at 17082 , meaning when the condition of 17080 is triggered, the limit order of 2 points price trailing will be sent to market
